

Supernova Group Continues its Green Transition, Activating 1 MWP of Green Energy at Supernova Ljubljana Šiška

Following the successful launch of Supernova Ajdovščina's operations at the end of last year, we are thrilled to continue our green transformation. Our commitment to sustainable practices is exemplified by the recent activation of photovoltaic panels on the roof of Supernova Šiška shopping center in Ljubljana. In Ajdovščina, we integrated 341 kWp of photovoltaic power plants, generating 375,000 kWh of renewable energy. Now, with the newly operational power plant at Supernova Ljubljana Šiška, we contribute to the city's growing green energy landscape, producing nearly 1 GWh of clean, green energy!

Ljubljana, 10 January 2023- Supernova Ljubljana Šiška, a part of the international **Supernova Group** specializing in the development and management of shopping centers, continues its journey towards a sustainable future by commissioning a solar power plant on the roof of its center. The latest solar power plant on the roof of the Ljubljana based shopping center, with total capacity of the installed photovoltaic power plants of 973 kWp, will generate 963,000 kWh of renewable energy. With this increase in the production of renewable energy, the project will contribute to the reduction of greenhouse gas emissions in the amount of 472 tCO₂ per year, covering a major part of the total annual electricity consumption.

"With new solar panels on the Supernova Ljubljana Šiška shopping center, we not only strengthen our positive impact on the environment but also set a concrete example and motivation for action in the retail sector. The commitment of the Supernova Group to invest in renewable energy sources through our Supernova Green Energy project reflects our dedication to sustainable business and responsible resource management, which is a priority for us in the years ahead," said **Markus Pinggera, Managing Director of the Supernova Group**.

In 2024 Supernova plans to further commission new additional solar power plants in its Core Countries totaling over 48,400,000 kWh of yearly green energy output.

About the Supernova Green Energy project

Several years ago, the Supernova Group initiated a significant green transition as part of its **Supernova Green Energy project**. The project's goal is sustainable and efficient operations, as well as reducing the carbon footprint. The green transition is implemented in all countries where the Supernova Group operates, including Austria, Slovenia, Croatia, Slovakia, and Romania. By the end of 2025 the Group aims to produce around 56 GWh

annually of electricity from renewable sources through solar panels on the roofs of its centers, reducing the carbon footprint by 24,000 tons of CO₂ annually. The Supernova Group expresses pride in the achievements to date and satisfaction that the entire group is moving in a positive direction of sustainable development, recognizing the importance of investing in initiatives that protect the environment and reduce the negative impact on the climate.

About the Supernova Group

Supernova Group operates 24 shopping centers in 14 cities in Slovenia and has invested over 550 million euros in the country through diverse investment projects. Beyond its presence in Slovenia the company actively participates in the markets of Croatia, Austria, Germany, Slovakia and Romania. With a total portfolio comprising more than 110 properties, its total value exceeds 2.2 billion euros.
